

Dear reader,

In today's society, more than ever before, we face a plethora of issues ranging from the loss of life caused by the global pandemic to the systemic inequality that has been growing exponentially for decades. Indeed, nearly everyone can think of an issue that affects them on a daily basis. Much of the attention drawn to these issues pertains to the fields of medicine and biology, whereas the field of socioeconomics has been greatly overlooked.

How often do you find journals, publications, or media attention that acknowledges socioeconomic findings? The answer, we presume, is not often. Despite socioeconomics being tied into nearly every aspect of our lives, it remains highly overlooked. Due to the lack of recognition, the economic and social aspects of research are not well recognized under their umbrella term of socioeconomics.

The longer these socioeconomic issues remain rooted in our society, the worse their implications. Despite this, recent efforts have been made to tackle these issues and find plausible solutions to them.

Enter the International Socioeconomics Laboratory.

Each day we have more to lose if we keep ignoring these concerns. Our publication at the laboratory, 'Across the Spectrum of Socioeconomics,' showcases extensive empirical research regarding these prevalent socioeconomic issues. The laboratory has used the findings to draw essential conclusions and create incentives for implementing effective policies to fix these issues. The journals you will read each contain empirical studies on four major subjects: health, education, equality, and community. This plays into our four-pronged approach to create tangible, legislative change through readily identifiable topics while also broad enough to incorporate diverse issues.

As we continue to grow and develop our network of researchers, we continue to analyze and bridge the fields of social science and economics to help foster a society of knowledgeable individuals. Individuals who will go beyond passive activism and create tangible change to build a sustainable future; that is the mission and priority of the International Socioeconomics Laboratory.

We will continue to provide you with extensive, non-partisan research to stimulate conversation and propel impactful legislation for building a brighter future.

Sincerely,

Alan Shnir
President of the Laboratory

Afran Ahmed
Vice President of the Laboratory
